Blow molded case

The **Jump-N-Carry** Booster Cable range covers all starting applications. Occasional passenger vehicle boosting is easily managed with the standard duty No.10 gauge cable set, **No. 410122**. Frequent use boosting of over-the-road trucks, implements and agricultural equipment is no match for the extra heavy-duty 2/0 cable set, **No. 422252**. Plus, we cover all applications in between.

All models are designed for all weather use, with TPR cable jackets featuring an operation temperature range from -40°C to +80°C. Each cable set is specifically mated with its corresponding clamp pair for maximum power transfer to the disabled vehicle, with clamp amp ratings increasing with the cable gauge. All clamps provide strong biting force to penetrate corrosion on battery terminals.

All models feature a 1 Year Limited Warranty against defect in materials and workmanship.
